I would like to urge the EPA to take stronger action and require a more comprehensive cleanup plan for the Portland Harbor Superfund Site.

Unfortunately the current proposed plan from the EPA is a very watered-down plan that does not address the return to health of the water quality and fish populations of the Willamette River. Under the current proposed plan, the resident fish would remain too toxic to eat and a vast majority of the pollution would be left in the river.

Instead, I support cleanup option "G", such that the goal of the cleanup must be to end the Fish Consumption Advisory, related to pollutants found in the Portland Harbor, for all individuals---in the near future.

The EPA's current preferred plan removes far too little contaminated sediment from the river and relies too heavily on "Monitored Natural Recovery", which leaves too much polluted material in the river.

The responsible parties who have liabilities for the PCBs, PAH, DDT and other toxic and persistent pollutants in the river sediments must meet their community obligation to do the right thing and conduct a comprehensive and timely cleanup.

This river is an asset to all members of the community and should not be irreparably damaged for the sake of corporate profits.

Thank you.
